NEUROLOGICAL EXAM

Circle "Normal", "Abnormal", "Other", "Can't execute" or "Missing" for each question.

If you circle "Abnormal" or "Other", also check the appropriate reason why or explain in comment field.

For each question, "Can't Execute" and "Missing" will mean the following:

-**Can't Execute:** subject will not/cannot attempt task secondary to dementia.

-**Missing:** examiner omits task, subject refuses (not secondary to dementia), or subject unable to do task secondary to physical reason.

1. VISUAL FIELDS BY CONFRONTATION

| | | <i>Circle</i> |

COMMENTS

This neurological examination was modified from similar instruments for assessment of Huntington's disease (Folstein, SE et al., *Neurobehavioral Toxicology and Teratology*, 1983, 5:605-609) and the CERAD exam for AD (Morris, JC et al., *Neurology*, 1989, 39:1159-1165.)
